Canadian Citizen located in Ottawa, ON

Education

- B.S. in Computer Science from the University of Ottawa September 2022 to Current

Work History

Software Engineer at Ciena, Ottawa

September 2025 to Current

- Developed a AI-powered log analysis tool using JavaScript, Vue.js, HTML, CSS, FastAPI and PostgreSQL, allowing developers to detect errors in router logs.
- Designed an ETL pipeline using Python to process logs from AWS, and automated its deployments using Docker and Ansible, increasing adoption to an additional team.
- Engineered a distributed task execution REST API using Python, RabbitMQ and SQLite, which increased the amount of concurrent users.
- Used Git and GitLab to manage code changes across the team while participating in weekly Agile stand-up meetings to implement feedback.

Projects

Markdown Editor Web Application

- Built a RESTful API hosting a LangGraph multi-agent pipeline to support iterative document editing, underpinned by CI/CD workflows to catch application issues and automate releases.
- Developed a markdown language and web-based compiler using Java, Spring Boot, Kafka, React, TypeScript, and C++, allowing users to edit and export their documents to HTML.

Digital Circuit Simulator Web Application

- Engineered a REST API using C#, .NET, ASP.NET, and PostgreSQL on AWS Lambda, enabling users to store and share projects.
- Created a circuit simulator using JavaScript, React, TypeScript, HTML, and CSS, allowing users to run simulations in the browser.

Web Search Engine

- Designed a multi-threaded search engine using Rust, React, PostgreSQL and Redis, to index over 1,000,000+ web pages and produce fast search results.
